SKIN PEN

Microneedling

SkinPen Precision is a microneedling device that utilizes collagen induction therapy to treat acne and surgical scarring along with fine lines and wrinkles. Skin Pen Precision is also found helpful in restoring the skin's abnormal pigmentation activity often found in skin conditions such as melasma, vitiligo and Solar Lentigenes (liver spots)

As we age, the production of collagen and elastin naturally diminishes, leading to wrinkles, skin laxity and other signs of aging.

The SkinPen is a medical-grade, state-of-the-art precision tool to address acne scars and the symptoms of aging. SkinPen Micro Therapy is a highly effective treatment that helps to reduce the signs of aging and enhance your skin's appearance by stimulating the production of new collagen and elastin. In this way, SkinPen can also be used to decrease the appearance of stretch marks on the body.

How SkinPen Microneedling Procedures Work

Each of our bodies has innate processes that will react to injury by producing new cells and extracellular materials (like elastin and collagen) to heal the damage. That is how the SkinPen achieves its results; by taking advantage of that natural process through the implementation of a finely tuned microneedling device, the SkinPen. This device initiates your natural healing process by creating hundreds of temporary micro-sized openings, or micro-channels, in the skin. These "fractionated" micro-channels are created thanks to the brilliant design of the SkinPen's disposable needle cartridge, which achieves its work without any thermal energy or chemicals applied to the skin.

Benefits Of Fractionated Approach

- Fast and safe method for inducing the production of collagen
- Requires no thermal energy and is entirely non-ablative (no removal of skin)
- Promotes scar-free healing
- Safe for all skin-types
- No major downtime

Skin Packages can be bespoke to your needs, this can be discussed at your consultation.
